Preparing for a Mammogram

Before scheduling a mammogram, GMC and the American Cancer Society recommend that you discuss any problems with your doctor. Inform them of any prior surgeries, hormone use and family/personal history of breast cancer.

You should not schedule your mammogram for the week before your period if your breasts are usually tender during this time. Always inform your health providers if there is any possibility that you are pregnant.

We also recommend that you:

- Do not wear deodorant, talcum powder or lotion under your arms or on your breasts on the day of your exam. These can appear on the mammogram as calcium spots.
- Describe any breast symptoms or problems to the technologist performing the exam.
- If your prior mammograms were not performed at a GMC facility, please obtain the images and provide them to the radiologist at the time of the current exam.
- Follow-up with your physician to discuss the results of your mammogram.

Latest Technology

All of our locations are fully digital. Digital mammography uses computers and detectors to produce an image that can be displayed on a high-resolution computer monitor, transmitted and stored like computer files. Unlike film-based, digital mammograms produce images that appear on the monitor in seconds. There is no waiting for film to develop, meaning shorter exam times.

We utilize Computer Aided Detection (CAD) in all mammography exams. It highlights areas that may be associated with cancer.

Screening Mammography

GMC has three state-of-the-art imaging center that offer screening mammography. All images are interpreted by board-certified radiologists.

- Bone Densitometry
- Screening Digital Mammography

Marion Allison Webb Center for Screening Mammography
